

DESIGN OF EXPERIMENTS (DOE)

Introduction

DOE has been used by statisticians in industry for more than fifty years. It is only recently that managers, engineers and scientists begin to explore these methods and find out the effectiveness in problem solving, design and development.

DOE will help to minimise the many variables that affect the yield of production in the industry. It permits many variables to be changed in a planned manner in order to come out with the most optimal values for such variable thereby saving time for production and cutting cost. It is no wonder that DOE is the most importance tools used in Six Sigma Black Belt Program.

Objective

This course will enable the participants to:

- provide means for tackling problems with long-term solutions.
- improve quality of products through optimising the variables.
- reduce material waste due to frequent rejects on the product resulting from quality problems.
- increase productivity by reducing quality problems.
- reduce the cost of production due to ability to detect quality problems faster.

Duration

2 days | 9am – 5pm | 14 hours

Who should attend

This course is suitable for technical professionals as well as chemical professionals such as managers, engineers, engineering assistants and chemists involved in design, development, production, manufacturing, quality, and maintenance of the product.

Entry Requirement

Participants should have basic knowledge of statistics.

Course Fees

Member: S\$444.05
Non-Member: S\$465.45
Registration Fee of S\$17.12 apply
SDF funding & SkillsFuture applicable
All fees stated are inclusive of 7% GST

Award of Certificate

Certificate of Completion will be issued to participants who have attended at least 75% of the course.

1 Sophia Road #05-06/07 Peace Centre S(228149)

Course Contents

Analysis and Control of Variables

- Introduction
- Dimension of Quality Improvement
- Application of Statistics
- Performance Optimisation
- Types of Experiments
- Concluding Remarks

Process Evaluation and Comparison

- Statistical techniques and decision making in the face of variability.
- Evaluation and characterisation of process variations.
- Comparative studies of process performance.

Multifactor Studies

- Framework of P-optimisation.
- Application of Design of Experiment.
- Factorial selection and coding.
- Factorial experiment: design and analysis.
- Two-level factorial designs.
- Interpretation of main and interaction effects.
- Significant tests for main and interaction effects

Case Studies

and updated training schedule

Membership Application

Register membership online at www.sqi.org.sg/membership-join/ or contact us to get the membership application form.

Membership Categories:

- ~ Organisation membership
- ~ Individual membership

SQI International is a subsidiary of Singapore Quality Institute (SQI). SQI operates as a non-profit professional institute that promotes and advances excellence in the field of quality in Singapore; and actively champions quality initiatives in the region and around the world through networking and collaborating with other international quality organisations.

SQI is a World Partner of the American Society for Quality (ASQ); and a Board Member of both the Asian Network for Quality (ANQ) and the World Alliance for Chinese Quality (WACQ).
