

LEAN MANUFACTURING

Introduction

This Lean Manufacturing course is design for individuals to understand the concept of Lean and to prepare individuals to implement the principles and concept to the workplace. The course had been designed specifically to enable individuals to benefit from Lean Thinking and Lean Techniques through workgroup discussion and playing of games.

The Lean Manufacturing methodology is a logical and systematic application that focuses on creating an organization environment that continuously seek and eliminate the Waste. When properly deployed, the organization will evolve into a learning organization that continuously lower the water level to surface more challenges. This methodology can lead to significant financial gain and increase of customer satisfaction.

Lean practitioner plays an important role in the organization to lead and develop the production system that focus on "Just in Time" Methodology to eliminate the financial liability of inventory and raising water level due to inventory built up. Lean practitioner also helps to create the environment to encourage problem solving and working toward a Lean vaporisation

Objectives

- Learn the Lean methodology, concept and philosophy.
- Learn to Lean tools & techniques to analyze real life problem.
